## BELIEF STATEMENT

I believe that all children should be given the same opportunities to learn & grow in a supportive manner, while focusing on a holistic care approach. Children should be nurtured within a calm, warm & friendly environment where they are given the confidence & tools to learn and develop through their own learning style.

---

## IN RELATION TO CHILDREN

I believe that children are individuals who have their own learning strengths, interests and voices which should form an integral part of their growth and development. I encourage and promote learning through play, investigation, experimentation and problem solving, through open ended questioning and strong role modeling, while allowing children to build their own identity, sense of security and autonomy.

---

## IN RELATION TO FAMILIES AND THE COMMUNITY

I believe that family & community plays a valuable part in supporting our children's learning and development. I strongly encourage parents to become involved in their children's learning by having open & rich conversations with the and encouraging all those around them to do so as well as this continues to enhance their holistic education.
